

# About Brisbane Metro

The first stage of Brisbane Metro is underway and will provide a 21km service connecting 18 stations along dedicated busways between Eight Mile Plains and Roma Street, and Royal Brisbane and Women's Hospital and University of Queensland.

## Benefits

- Getting you home up to 50% quicker with peak services every three minutes
- Reducing congestion in the city with a better planned network
- Making it easier to travel with turn-up-and-go services
- Metro will run 24 hours on the weekend, so you can do more of what you love

## Background

Brisbane City Council is building a greater transport network to help you get from the city to the suburbs, quicker and safer. New high-capacity and high-frequency Metro services will run along dedicated busways and link with suburban bus and train services as part of a better planned network. It's all part of Council's plan to get you home quicker and safer with more travel options, less congestion and better public transport.

Brisbane Metro was announced in early 2016 to address city congestion and constraints on the bus network. Along with meeting the demand for quick, frequent and reliable travel to the city.

In May 2017, Council released the [Brisbane Metro Business Case](#). This followed a 12 month detailed assessment of the benefits, costs and impacts of delivering the project.

In March 2018, the project was confirmed and remains a high priority project on the Infrastructure Australia Priority List.

The [draft Design Report](#) released in April 2018, describes the construction and operation of Brisbane Metro in detail. The report was available for consultation:

- on Council's Your Say community engagement website
- at community information sessions

In September 2018, Council released the Brisbane Metro Draft Design

Report [Consultation Outcomes](#) document. This document provides a summary of key feedback themes identified through consultation and Council's response.

The expected cost to build Brisbane Metro is \$944 million. Council has committed to fund \$644 million of the project's capital cost. The Australian Government has provided a \$300 million funding commitment in the 2018-19 Federal Budget.
